MSc Project Proposal

Project Co-ordinator: Jack McDonnell

Project proposal
You are required to propose your chosen project for approval by a panel of staff.

Please note the following:
- Each student is expected to identify their own project topic.

- Projects must be of sufficient depth to achieve MSc standard. Previous MSc projects (and L8 for comparative reference) are available in the ITLC archive (P1160).

- The project is worth 30 credits and carries an indicative 39 hours per week independent workload. It is a significant undertaking and projects will be a 15000 to 20000 word dissertation.

- Proposals are expected to be related to one or more general areas on the Data Analytics MSc programme from modules in Semesters 1 and 2.

- Students who have difficulty identifying a topic should communicate this to the project co-ordinator who will assist them in choosing an area. It remains your responsibility to propose a suitable project.

- Project work must be distinct from any other work presented for assessment. If you are unsure about this, you should discuss with your supervisor and the module lecturer concerned.

Approval process:
- Your proposal must be presented under the required headings and you can use the proposal template on Moodle.

- You must submit this as a PDF by Monday February 14th at 23:55.

- A short interview may be scheduled where your proposed project will be discussed.

- Projects will be either approved or rejected following this process. Rejected projects will be given feedback to assist with revision for re-submission.
